

SHIELDED BY THE BEST

HAS TIME CAUGHT UP TO YOUR METAL ROOF?

Duro-Last® is the solution! Although metal roofs can offer lower initial installation costs and superior protection against fire, installing a Duro-Last membrane over your metal roof means:

- No more seam and fastener problems.
- No more cracks and leaks around penetrations.
- No more rust and corrosion.

THE PREFABRICATION ADVANTAGE

Through our custom prefabricated roof systems – which can include both the membrane and all accessories – up to 85% of the seams are completed in our factory-controlled environment. This eliminates most of the on-site fabrication that can lead to roof leaks and the results are a long-lasting, reliable roof.

HIGH REFLECTIVITY, LOW ENERGY BILLS

Installing a Duro-Last roof system will do more than protect your building – it will also protect your budget from high energy costs. By reflecting up to 86% of the sun's energy, white Duro-Last membranes can greatly reduce energy consumption and costs. Recent studies have shown that these benefits can be seen in all climates within North America.
